

NEW! FLOOR DIAMOND MAINTENANCE PADS

Features and Benefits

- No harsh chemicals required
- System can be used with an auto scrubber, even dry
- No need for specialized contractors to perform the cleaning process
- Provides a more consistent finish on a variety of surfaces
- Minimizes heat build-up on dry applications resulting in a higher gloss

Floor Diamond Maintenance Pads

Unmatched in performance, Norton Floor Diamond Maintenance Pads have a robust interlocking web and are designed to withstand the harsh applications of concrete and natural stone floor maintenance. We have a wide grit range permitting light maintenance to a final shine for most routine maintenance programs on all machine types. High quality diamond and a supreme bonding system allow the pads to take a dull floor and pop a mirror gloss shine.

ALL THE **MUSCLE** YOU NEED.™

FLOOR DIAMOND MAINTENANCE PADS

Deep Cleaning

After you clean the floor by your normal wet or dry method, begin with our coarse pad working across the floor evenly using four or five passes for lighter machines and less with heavier machines. Scratches are removed or greatly reduced and floor is left smooth and clean.

Regular Cleaning

You can maintain the shine level you desire by simply using the Norton floor diamond maintenance pads on a regular basis. This could be as little as once per week depending upon the level of traffic. Once you have determined the shine level you want (medium, fine or very fine), simply use that final pad grit periodically on your auto scrubber or buffer machine. This should be done in conjunction with your normal daily cleaning system.

Grit Guide

Coarse Grit – perfect for cleaning and resurfacing concrete or natural stone floors.

It works very well for floors that are very dirty with light surfaces scratches. The coarse grit pad should be followed by the medium pad as you re-surface the floor.

Medium Grit – the second step to re-surfacing a natural stone or concrete floor following the coarse pad. It can also be the starting pad if the floor is slightly dirty with faint surface scratches.

Fine Grit – the third step in the re-surfacing of a natural stone or concrete floor following the medium grit. Can also be used a maintenance pad on most surfaces to keep the shine of the floor on a regular basis.

Very Fine Grit – the final step in the re-surfacing of a natural stone or concrete floor following the fine grit pad. It is also the recommended pad for on-going maintenance of the floor to keep the shine level of the floor on a regular basis.

Diamond Pad Performance Data

PAD	GRIT	TIME LASTED	AREA POLISHED
Coarse	500	3 hrs 30 min	23,589 sq. ft
Medium	1000	6 hrs 50 min	48,589 sq. ft
Fine	1500	9 hrs 10 min	64,777 sq. ft
Very Fine	3000	9 hrs 10 min	64,777 sq. ft

Testing performed on a polished concrete floor.
