

SURFACE STRIP AND PREP PAD

CONCRETE FLOOR MAINTENANCE

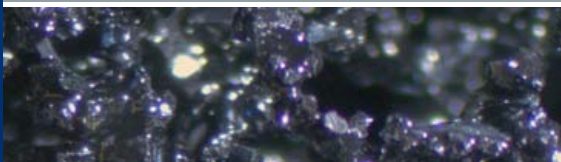

Features and Benefits

- Tough web construction
- Two abrasive grains
- Improved manufactured process
- Extended pad life and performance
- Provides removal of heavy grime, or light surface grinding
- Low cost compared to normal floor pad usage or diamond grinding
- Can be used wet or dry

The Answer to Your Floor Preparation Needs

Preparing existing concrete surfaces is easier than you might think. Whether the job calls for removing existing finishes or creating a "bite" surface for a new sealer, we have the answer. With over 50 years experience of manufacturing floor pads, the R&D team at Norton has developed the Surface Strip and Prep Pad specifically for this task! State-of-the-art equipment and manufacturing process allow the abrasive grain and bonding to be evenly dispersed throughout the web, enhancing pad life under the extreme conditions of hard floor surface cleaning. The self-cleaning high quality abrasive grain combination allows the pad to evenly clean and strip while producing a floor surface that is ready for specified finish. Increase production by using in conjunction with diluted stripping products.
